

**AMENDMENTS TO THE CLAIMS**

**This listing of claims supersedes all prior versions and listings of claims in this application:**

**LISTING OF CLAIMS:**

1. (Original) A resin member, comprising  
a half-mirror evaporated layer formed on a resin substrate by spattering, and  
an aluminum evaporated layer formed partially on the half-mirror evaporated layer,  
wherein a portion with the aluminum evaporated layer is formed to be a reflecting mirror  
face, and  
a portion without the aluminum evaporated layer is formed to be a half-mirror face.
2. (Original) A resin member according to Claim 1, wherein the half-mirror evaporated  
layer is formed by chromium spattering.
3. (Original) A resin member according to Claim 2, wherein reflectance of the half-  
mirror face is determined to be 30 to 65%.

4. (Original) A resin member according to Claim 1, wherein the half-mirror evaporated layer is formed via an under-coat layer on the resin substrate.

5. (Original) A resin member according to Claim 1, wherein a protective film is formed on the aluminum evaporated layer.

6. (Original) A vehicle lighting apparatus comprising an extension made of the resin member according to Claim 1.

7. (Currently Amended) A vehicle lighting apparatus, comprising  
a half-mirror face having a half-mirror evaporated layer formed on a resin substrate by chromium spattering, and  
a reflecting mirror face having a chromium evaporated layer with a ~~[[lager]]~~ larger thickness of chromium than a thickness of the half-mirror evaporated layer of the half-mirror face.

8. (Original) A vehicle lighting apparatus, comprising a reflector part and an extension, wherein, at least on the extension, a half-mirror evaporated layer is formed by spattering.

9. (Original) A vehicle lighting apparatus according to Claim 8, wherein the half-mirror evaporated layer is formed by chromium spattering.

10. (Original) A vehicle lighting apparatus according to Claim 9, wherein the half-mirror evaporated layer is formed on the reflector part and the extension, and an aluminum evaporated layer is formed on the half-mirror evaporated layer of only the reflector part.

11. (Original) A vehicle lighting apparatus according to Claim 10, wherein, on a non-significant face of the reflector part which does not reflect the light emitted from a light source in a parallel direction with an optical axis, the aluminum evaporated layer is not applied and half-mirror evaporated layer is exposed thereon.

12. (Original) A vehicle lighting apparatus according to Claim 9,  
wherein an aluminum evaporated layer is formed on the reflector part via an under-coat layer on the resin substrate, and  
the half-mirror evaporated layer is formed on the extension.

13. (Original) A vehicle lighting apparatus according to Claim 9, wherein the extension is formed to be separate from the reflector.
